

8th May 2006

To Whom It May Concern:

Hertel UK Ltd as a Company can confirm that we have used Chemco International materials.

RL 500 PF Primer Finish coat on structural steel and tank externals within the petrochemical site at Grangemouth and Finnart Ocean Terminal was applied very successfully.

RA 500 Epoxy glass flake has been successfully used as internal tank lining within tanks 714 Finnart Tank 604, Grangemouth and various tanks around site.

RB300 Vinyl Ester Glass Flake has been used as a tank lining on Knock-Out Drums on BP Kinneil Tank 122 on the Refinery and on various vessels around site.

At present we are using it on Tank 820 on BP Kinneil.

We find the materials very good to use and can be adapted by Chemco to meet our application requirements.

A handwritten signature in black ink, appearing to read "W. Whyte", with a stylized flourish at the end.
